

Frontend Engineer: Task to Perform for Interview Shortlisting

Problem Statement:

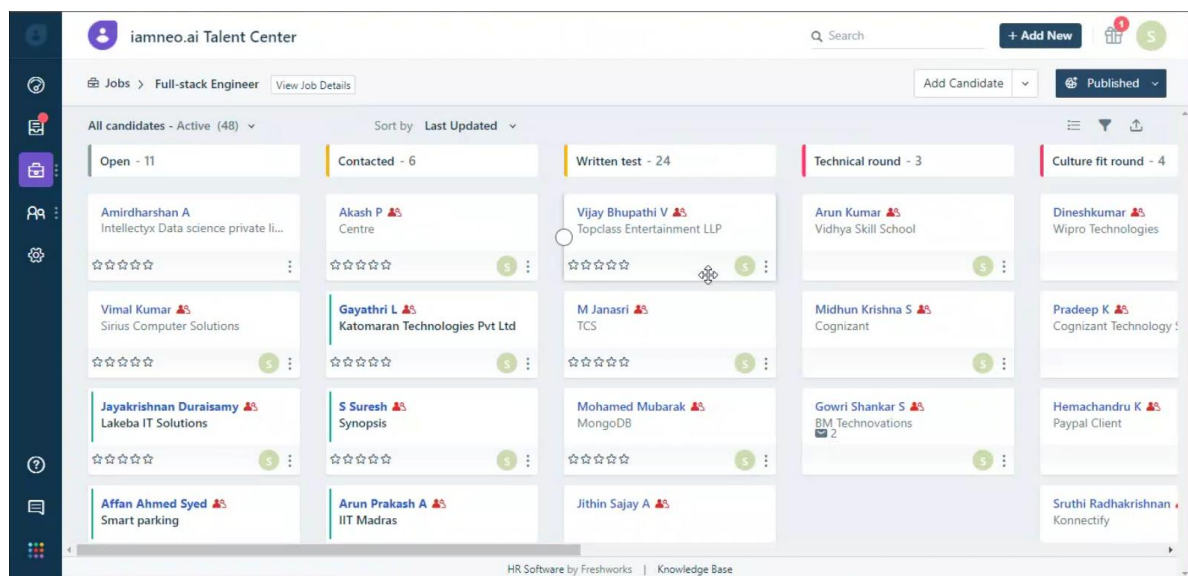

We are building a Recruitment tool for Assessment and as part of that, the Recruiters are finding it difficult to manage when 1000+ candidates apply. So, need to build a UI-friendly Kanban board for managing the overall process.

Expectation:

- Build a React or Angular with a UI replica of the attached image, which should have the Kanban style drag and drop functionality as given in the following link.
- Enable drag and drop of the cards with reference's using:

<https://github.com/atlassian/react-beautiful-dnd>

<https://randomuser.me/>

Submission criteria:

Email us back with the following

Requirement should meet the following criteria:

1. The requirement should meet drag and drop functionality of individual cards
2. The requirement should meet drag and drop of the individual group
3. Ability to search a card with the name

Submission should include

1. Host it in Heroku or any other hosing website and share us the link
2. Share the code over a public repository of Github
3. Submit your code quality report obtained from <https://sonarcloud.io/>
